

Issues:

- When the page is loaded all the fields should be empty. Right now, data appears
- the input check should be done As you leave an input field not at the end otherwise you End up with too many errors and it is hard to go back to figure out what you entered wrong
- Since tab 2 and tab 3 have some of the same fields the input should be the same Some random blablabla...
(for example if I entered TEST BANK in tab 2 for Current Bank and then I go to TAB 3 Under Current bank I should see the same bank TEST BANK)
- It appears that nothing is save when you click save – when you click save a record for the session should be save in the table Leads (just 1 record). When a user goes on this page again a new record should be saved (added to the table Leads) so all the fields should be reset if the page is loaded (but do not reset the entire session since this page will be used with others and some session available coming from other pages will still need to be available.
- Total Applicant debts or Applicant Total income accept non numeric input and then they display the last numeric value entered. Total Applicant debts also accepts numeric value greater then 9999999999
- If you type 23 in the current mortgage rate it says that is not valid but it should be. Any number up to 99.99 with or without the % sign should be allowed
- Current monthly payment accepts non numeric characters and it should not
- Mortgage Starting Date and Expire Date accept non numeric characters and should only accept a date
- Add in the table Leads 3 additional fields to save the options available under Equity Pull out Reasons

-

Other random blabla...
